

Diccionario de Datos

Versión inicial (Parte I). Diccionario generado automáticamente a partir del perfilado del dataset crudo (101 columnas, 111,821 registros, 36 archivos JSONL), antes del proceso de limpieza, renombramiento y feature engineering. Los nombres de columna corresponden a la notación original de la API rFMS de Volvo (en inglés, con notación de punto). Este diccionario fue la base para la clasificación y descarte de variables documentada en la Sección 6.4 del informe.

Variable (nombre original API)	Tipo	% Nulos	Valores únicos	Ejemplo
IDENTIFICACIÓN Y CONTROL DEL EVENTO
